## ABCD are related since they all belong to prime form (016)

A and B are related by transposition since we read the prime form for both sets from the same direction—in this case left-to-right.

They are related at T3 since:

$$8 - 5 = 3$$
  
 $1 - 10 = -9 = 3$ 

7 - 4 = 3

we read the prime form for each set in different directions--in this case C is read left to right; D is read right to left.

C and D are related by inversion since

They are related at T2I since:

$$4 + 10 = 14 = 2$$
  
 $5 + 9 = 14 = 2$   
 $10 + 4 = 14 = 2$
